Trees, shrubs, and plants provide many benefits. By planting new trees, or saving and caring for existing trees, you help reduce the threat of global warming by retaining carbon dioxide in trees rather than in the atmosphere. Shade trees help protect your house from the heat of summer. Windbreaks help to protect your home from the chilling wind in winter. Trees and shrubs provide nesting sites, food sources, and protective cover for wildlife. Trees and shrubs not only provide beauty to your landscape, but lasting value to your property.
